

Project #1 (Milestone 1)

CSC 261/461 (Database Systems), Spring 2020, University of Rochester

Due Date: Sunday, 02/07/2020 (11:59 pm)

Introduction

A good team project can vary to a great extent in complexity, difficulty, scope, and topic. For this project, the only requirement that we set is that the project should be related to something we have been studying in this course. You should eventually use MySQL for creating and querying your database, and PHP to create an interface accessible to the user and the administrator to access and/or alter the database.

To make sure that your team is going in the right direction, we will set up multiple milestones, from the beginning to the end of the project (and the semester).

Milestone 1

You need to hand in a report which contains the overview of your project proposal. This overview can change slightly as we go over the course, but the main theme should be intact.

The proposal should consist of two (2) or more pages describing the problem you plan to solve, outlining how you plan to solve it, and describing what you will "deliver" for the final project. Your report should contain the following sections:

1. **Project details:** Name of your project, your team, and team members. Please include Team ID and Member ID from the google sheet.
2. **Problem Statement:** Describe the problem that your proposed database system will solve. Why do you need a database instead of an excel file?
3. **Target user:** Who will use your database? Who will administer the database? You are encouraged to give a real-life scenario.
4. **List of Relations:** Identify at least 4 relations (tables) that you need to maintain for this database. Provide schema (attributes and their data types) for each of these relations.
5. **Web-interface:** Provide rough sketches of the web-interfaces that you will design. Web interfaces are mainly 'forms' where a user can provide input, and based on the input, the tables are updated and/or query results are produced. This is the user interface (UI) of your project.
6. **Data:** How will you populate your relations? You can get the data from external sources or you can create your own data.

How to submit

Save your report as Milestone1.pdf and upload to Blackboard. Only the team leader (Member #1) need to submit the file.
